# JOBDIVA WEBHOOKS

## JobDiva Webhooks

JobDiva supports Webhooks for most data entities. You'll find the Webhook settings under **Settings / My Team / Profile**. On that page, scroll down and open **Manage API Webhook**.

You must provide both your endpoint URL and a "Signature" key to validate incoming requests. JobDiva's Webhooks support Insert (Create), Update, and Delete operations, and you can choose which actions to trigger.

Webhook activity can be reviewed under **View Webhook Logs**, located at the top left of the Webhook popup.

You can view the complete schema for data entities by clicking **Schema** next to the appropriate entity.
